$$\begin{aligned} \textcircled{1} \quad 3 + 2x &= -9 \\ -3 \quad -3 \\ 2x &= -12 \\ \frac{2x}{2} &= \frac{-12}{2} \\ x &= -6 \end{aligned}$$

$$\begin{aligned} \textcircled{2} \quad 12 &= -5n - 3 \\ +3 \quad +3 \\ 15 &= -5n \\ \frac{15}{-5} &= \frac{-5n}{-5} \\ -3 &= n \end{aligned}$$

$$\begin{aligned} \textcircled{3} \quad \frac{h}{2} + 4 &= 1 \\ -4 \quad -4 \\ 2 \cdot \frac{h}{2} &= -3 \cdot 2 \\ h &= -6 \end{aligned}$$

$$\begin{aligned} \textcircled{4} \quad -7 &= -3 + \frac{k}{4} \\ +3 \quad +3 \\ 4 \cdot -4 &= \frac{k}{4} \cdot 4 \\ -16 &= k \end{aligned}$$

3/23 Adjacent / Vertical Angles

Remember from last year:
What are the different types of angles?

Definition of ANGLE:
2 rays with a common endpoint

New word: **ADJACENT**

next to,
share a common side

When two states are **adjacent**,

they are next to each other and they share a common border.

With your partner, come up with a list of things that could be considered 'adjacent.'

shirt / pants

desks

Walls at a corner

Small + large intestines

storage units

color wheels

teeth

Work with a partner. Some angles, such as $\angle A$, can be named by a single letter. When this does not clearly identify an angle, you should use three letters, as shown.

\angle
means
"angle"

$ABEF$ and $BCDE$ are squares.

- Name all the right angles, acute angles, and obtuse angles.
- Which pairs of angles do you think are *adjacent*? Explain.

a) right:

$\angle ABE$	$\angle C$
$\angle CBE$	$\angle EPC$
$\angle AFE$	$\angle DEB$
$\angle A$	$\angle FEB$

acute

$\angle BDE$
$\angle BDC$
$\angle DBC$
$\angle DBE$

obtuse

$\angle ABD$

Adjacent Angles

Words Two angles are **adjacent angles** when they share a common side and have the same vertex.

Examples

$\angle 1$ and $\angle 2$ are adjacent.

$\angle 2$ and $\angle 4$ are not adjacent.

Vertical Angles

Words Two angles are **vertical angles** when they are **opposite angles** formed by the intersection of two lines. Vertical angles are **congruent angles**, meaning they have the same measure.

Examples

$\angle 1$ and $\angle 3$ are vertical angles.

$\angle 2$ and $\angle 4$ are vertical angles.

Use the figure shown.

a. Name a pair of adjacent angles.

b. Name a pair of vertical angles.

$\angle FBA$ and $\angle CBD$
 $\angle ABC$ and $\angle FBD$

● On Your Own

Name **one pair** of adjacent angles and **one pair** of vertical angles in the figure.

adj:
 $\angle 1 + \angle 2$ $\angle 1$ and $\angle XWZ$
 $\angle 2 + \angle 3$
 $\angle 3 + \angle 4$:
 $\angle 4 + \angle 1$:

Vertical:
 $\angle 1 + \angle 3$
 $\angle 2 + \angle 4$

adj: ~~$\angle 1 + \angle 2$~~
 $\angle 4 + \angle 5$
 $\angle NJQ + \angle 2$

Tell whether the angles are *adjacent* or *vertical*. Then find the value of x .

a.

adj VA
VA
 $x = 70$

3.

adj.
 $85 + x = 180$
 -85 -85
 $x = 95$

b.

Adj
 $31 + (x + 4) = 90$
 $35 + x = 90$
 -35 -35
 $x = 55$

4.

Vert.

5.

$x = 90$
 $69 + (2x - 1) = 90$
 $68 + 2x = 90$
 -68 -68
 $\frac{2x}{2} = \frac{22}{2}$
 $x = 11$

Using a protractor, draw a pair of vertical angles that measure 40°

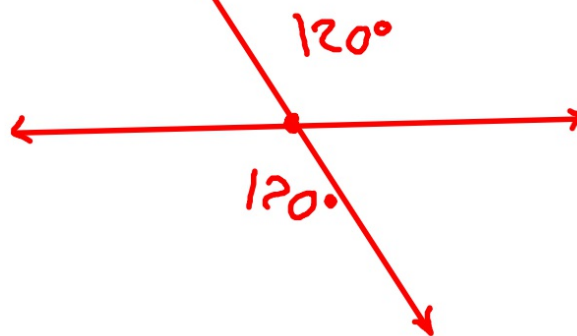

Step 1: Use a protractor to draw a 40° angle.

Step 2: Use a straightedge to extend the sides to form two intersecting lines.

Draw a pair of vertical \angle 's that measure 120°
