

NOVEMBER 18, 2014

1ST
2ND

STARTER

In order to win a laptop, students had to guess the exact number of gumballs in a jar. The students guessed 41, 43, 45, 50 and 55 but nobody won. The guess were off by 3, 7, 5, 7 and 2 (given in no particular order). Use this information to find the exact number of gumballs in the jar.

PALAMINO

11/18 Distributive Property with Rational Numbers

3 greens and 2 blues
 $3g+2b$

$3g+2b$

$3g+2b$

$$\begin{aligned} &3g+2b+3g+2b+3g+2b \\ &= 3(3g+2b) \end{aligned}$$

IMAGINE SHOOTING 2 ARROWS AT ONCE...

NOW TRY THESE...

$$\begin{aligned} & 3(4s + 3d) \\ &= 3 \cdot 4s + 3 \cdot 3d \\ &= 12s + 9d \end{aligned}$$

$$\begin{aligned} & 2(6c + 2x) \\ &= 12c + 4x \end{aligned}$$

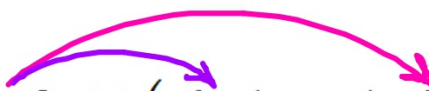

The positive becomes the ADD

$$3(2x + 4)$$
$$= 6x - 12$$

$$-5(7 + 2k)$$
$$= -35 - 10k$$
$$= -10k - 35$$

Variable must
be first!

$$4(1.5n + 3.2)$$

$$= 6n + 12.8$$

$$-0.7(4.1 - 1.2b)$$

$$= 0.84b - 2.87$$

$$\begin{array}{r} 1.5 \\ \times 4 \\ \hline 6.0 \end{array}$$

$$\begin{array}{r} 3.2 \\ \times 4 \\ \hline 12.8 \end{array}$$

$$\begin{array}{r} 1.2 \\ \times 0.7 \\ \hline .84 \end{array}$$

$$\begin{array}{r} 4.1 \\ \times 0.7 \\ \hline 2.87 \end{array}$$

$$\frac{5}{6} \left(-\frac{1}{3}c - 3 \right)$$
$$= -\frac{5}{18}c - 2\frac{1}{2}$$

$$\frac{5}{6} \cdot \frac{1}{3}$$
$$= \frac{5}{18}$$

$$2\frac{1}{2} \left(d - \frac{1}{2} \right)$$
$$= 2\frac{1}{2}d - \frac{1}{4}$$

$$\frac{5}{2} \cdot \frac{1}{2}$$
$$= \frac{5}{4}$$

HOMEWORK

Pink WS2

"Because chicks dig pink!" — Randy

DUE Wednesday
